

Cleanse data as it flows into your company

Make sure you have the Apps to validate and enhance data in real time

Data8's Apps

Save time and money - Data8's Integr8 is a cloud based service that allows companies to quickly capture name and address data, saving time and money. The service is modular so clients can pick and choose which Apps they require to enhance any existing data capture system.

Speed and accuracy - Clients use the services to add professional quality data to their web sites and business applications. High quality data lies at the heart of business decision making and customer service, and Integr8 helps clients capture and validate data quicker and more accurately than ever before.

Simple to install - The service is accessed via the web, so client's website or business application simply makes a request to data8's secure servers and retrieves the result. Once the connection is made to our web service there is no software or data to install and keep up to date.

Peace of mind - Integr8 clients are accessing data that is continually updated, there is no need for them to worry about getting the most up to date information.

Future proof - Clients benefit from data8's belief in continual development, new Apps are developed to cope with the fast changing business environment and clients are reassured that they have the very best service and support.

If data8 don't have an App for you they will build one.

Data8 Apps Store

Postcode Lookup App

- PAF based data capture - update your database accurately with just house number and postcode, saving time and money by accurately capturing address information
